Product Tester

The Opportunity:

Being a product tester is all about breaking a product – we need you to break our products in the lab so they never break in the field. Our products keep people safe: they keep the worker that is handling nuclear material safe, they keep people safe by helping doctors diagnose disease and they are the tools that keep us safe from nuclear terrorism. If you want to work on cutting edge products that make a difference in the world then this is the job for you.

Responsibilities:

- All aspects of system/acceptance testing
- Producing test plans and specifications
- Working with the development team to identify issues
- Checking product functionality against requirements
- Proactively identifying weaknesses and potential issues in products
- Providing structured feedback of test results
- Testing on a cross-range of technical products, including hardware and software
- Workload planning and prioritising

Essential requirements:

- Excellent problem-solving skills, able to work on own initiative and as part of a multidiscipline team
- Clear report writing and communication skills
- Able to easily pick up new technologies
- Proven demonstrable experience in a product testing role
- A degree in an engineering or scientific specific discipline
- Attention to detail
- Office 365 experience (e.g. MS Office, MS Teams, Visual Studio Team Services) leadership

Desirable skills:

- Experience of working with radiation, electronics and/or scientific products
- Understanding and development processes including milestone planning

The Benefits:

- Life Assurance
- Stakeholder pension scheme
- Share Options
- Private Health Insurance Scheme
- 25 days holiday plus statutory days
